

Roadmap to 2030: FAQs

What is the Roadmap to 2030?

The Roadmap to 2030 is a strategic initiative developed by Transform Health in collaboration with its partners, aimed at accelerating progress towards universal health coverage (UHC) by 2030 by leveraging the potential of digital technology and the use of data. The initiative will start with a process of building consensus around the enabling environment necessary to leverage digital health tools and data to drive inclusive, equitable, and sustainable progress toward UHC.

The Roadmap to 2030 will chart our collective journey, outlining key challenges and priorities that the coalition must address in the coming years.

Why is the Roadmap to 2030 needed?

Digital technology and the use of data can accelerate universal health coverage by making health systems more efficient and more responsive, extend healthcare coverage, improve healthcare quality, and reduce costs.

In 2015 United Nations Member States pledged to achieve [universal health coverage \(UHC\)](#) by 2030 as part of the Sustainable Development Goals (SDGs). On current trends we will only see 50% of the global population benefit from universal health coverage by 2030.

Despite significant progress in the digitalisation of the health sector, there are still substantial gaps in the enabling environment that prevent the full potential of digital technologies from being harnessed to achieve UHC by 2030. Many countries face challenges related to regulation and legislation, political commitment, leadership and management, and funding, which are slowing or hampering the integration of digital tools into existing health systems. These barriers also limit the effectiveness of digital health innovations in achieving inclusive and equitable health outcomes at scale and in a sustainable manner. The roadmap to 2030 intends to address these gaps through collective action.

What is the goal of the Roadmap to 2030?

The Roadmap to 2030 aims to chart our collective journey to 2030. Its purpose is to build consensus around the key priority areas we should all focus on to harness the potential of digital technology and the use of data to achieve UHC by 2030.

How will we achieve this?

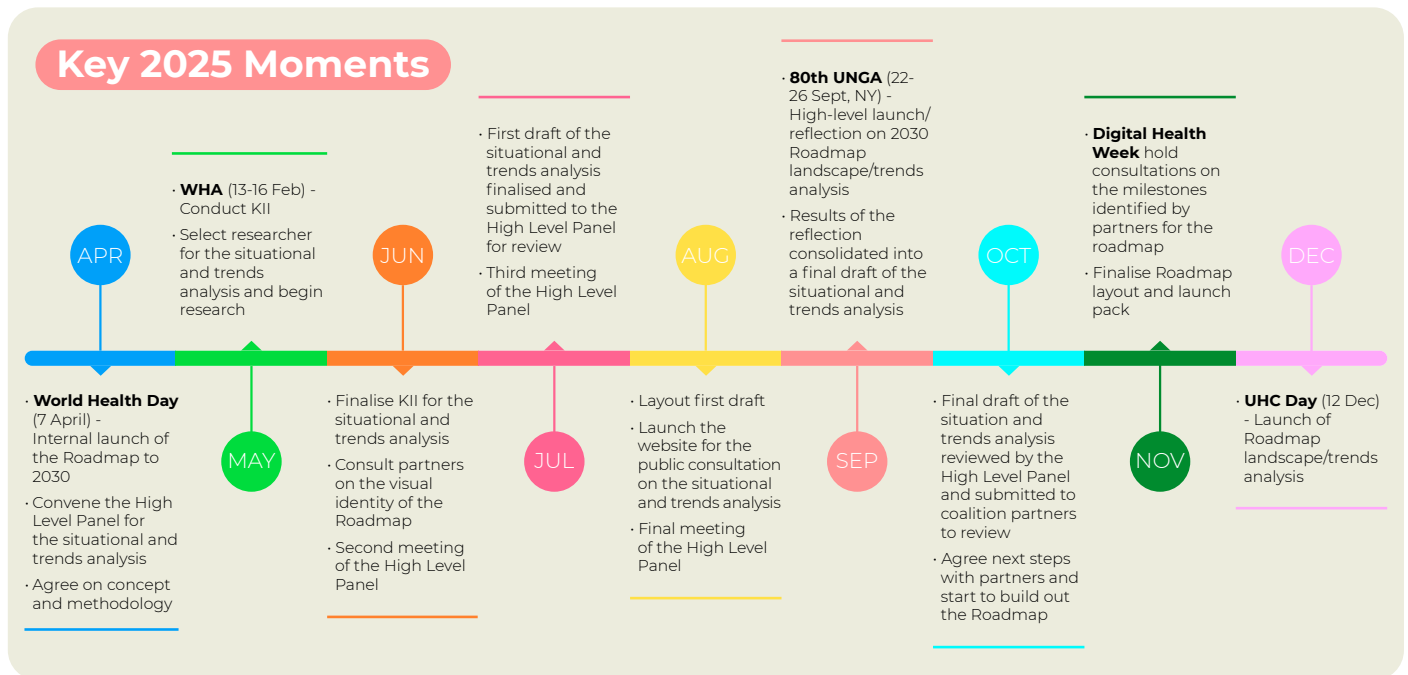

First, it aims to assess the current context and trends surrounding the digital transformation of health systems. This includes identifying the priority actions needed from governments and other accountable parties to create an enabling environment that supports digital health development. Second, the initiative will identify key priorities and milestones to be achieved in the coming years, culminating in a coordinated global effort to drive the digital transformation necessary to reach UHC by 2030.

Ultimately, we seek to catalyse collaborative action among stakeholders to ensure digital health is a key driver in the achievement of UHC.

What is the timeline for the Roadmap to 2030?

Leading up to the launch on UHC Day in December 2025, several activities will take place:

How can partners participate in the Roadmap to 2030 development?

Partners can participate in the development of the Roadmap to 2030 in several ways:

Initially, they can engage by completing surveys and taking part in consultations related to the Situational and Trends Analysis, which will help shape the understanding of the digital health landscape.

Partners can also share their strategic objectives to assess how their work aligns with the overall goals of the Roadmap.

Furthermore, there will be opportunities for partners to contribute to the development of the Roadmap's branding and visual identity, ensuring that the initiative resonates with diverse audiences and reflects the coalition's values.

What is the internal announcement about?

The internal announcement of the Roadmap to 2030 is aimed at informing our 200+ partners about this important initiative and inviting them to participate in its development. Through this announcement, we will share details about the context and objectives of the Roadmap, and explain the process for partner engagement. We will also invite partners to contribute to building consensus around the enabling environment for digital health and to collaborate on identifying the milestones that need to be achieved and set this out in the Roadmap.

How can partners stay updated?

Partners will be able to stay informed through regular updates provided via newsletters and the internal digest. The Roadmap to 2030 website will be continuously updated, offering a space for partners to access the latest developments and documents. In addition, we will be hosting periodic consultations, reflection spaces, and events throughout the year to keep partners engaged and ensure they have the opportunity to contribute.
